SHREY SHAH

Product Operations | AI, APIs & Business Execution | Crypto Fintech
Ahmedabad, India | +91 6355267237 | shreyshahsds@gmail.com | linkedin.com/in/shreyshah2003 | github.com/shreyshah2003 | shrey.si

SUMMARY

Computer Engineering graduate with 1.5+ years in a high-scale crypto fintech environment, working across Product, Engineering, QA, customer issues, data, APIs, and operational workflows. Translate ambiguous problems into structured requirements, technical investigations, documentation, owners, and next actions; follow issues through diagnosis, escalation, validation, and closure. Hands-on with REST APIs, JSON, SQL/PostgreSQL, AWS Athena, Datadog, Postman, Jira, AI tools, and production LLM workflows, with strong 0-to-1 product and process thinking.

SKILLS

Program & Execution: Problem definition; PRD/BRD drafting; owners/dependencies/risks; issue tracking; escalation; acceptance/verification thinking; Jira
Product & Technical Analysis: User journeys; workflow mapping; expected-vs-actual analysis; REST APIs; JSON; Postman; SQL/PostgreSQL; AWS Athena; Datadog; data-flow investigation
Research & Decision Support: Structured research; evidence-based recommendations; competitor/product analysis; requirements synthesis; KPI thinking; concise documentation; technical-to-business translation
AI & Cross-Functional Tools: ChatGPT; Claude; Claude Code; Python automation; Product/Engineering/QA coordination; Git/GitHub; Figma; Linux/Bash

WORK EXPERIENCE

Product Support Specialist **Jan 2025 - Present**
Speed, Ahmedabad - crypto fintech platform

- Own ambiguous production problems from intake to verified resolution: establish the issue and expected outcome, gather customer/business context, inspect logs/APIs/data, identify dependencies and blockers, coordinate Product/Engineering/QA, and validate the resulting fix or workaround.
- Draft PRDs/BRDs and structured feature requirements covering expected-versus-actual behaviour, workflows, edge cases, business context, and supporting technical evidence so engineers and stakeholders can act on a shared understanding.
- Investigate REST APIs, transaction states, integrations, logs, and database behaviour using Postman, Datadog, SQL/PostgreSQL, AWS Athena, and internal tooling; reproduced a previously unknown critical defect and escalated evidence before broader production impact.
- Translate recurring customer and operational signals into actionable Product/Engineering inputs, surface risks and gaps early, author feature/KB documentation, and help coordinate priorities and issue ownership within a four-person support team serving a nearly 1M-user platform.
- Helped shape an LLM-powered support layer that retrieves context, diagnoses cases, routes work, and suggests responses; now serve as its sole production maintainer. During up to 10x ticket growth, AI-assisted workflows and process improvements contributed to ~40% lower response time.

AI Intern (Remote) **Sept 2024 - Dec 2024**
Alesa AI, London

- Built, tested, and documented LLM/data-processing workflows and Python automations for a distributed AI team, supporting experimentation, debugging, repeatability, and clear async handoffs.

PRODUCT & TECHNICAL PROJECTS

MATHLAB (0-to-1 Business Operating Platform)
Vertical SaaS, requirements discovery & decision analytics

- Translate a fragmented education business into a structured software system by mapping stakeholders, current-state workflows, unmet needs, user journeys, roles, and measurable outcomes across student practice, admissions, retention, marketing, teachers, and centres; define product flows, data capture, KPIs, and Student/Teacher/Admin views.

Swasthya+ (AI-Powered Healthcare Application Project)
AI services, APIs, cloud data flows & observability

- Designed backend services connecting AI-driven analytics with REST APIs, cloud-backed user/account flows, and observability for real-time diagnostics; worked through service interactions, data behaviour, failure investigation, and technical documentation to understand how changes propagate across an application.

EDUCATION

B.E. in Computer Engineering **Sep 2021 - Jun 2025**
LDRP Institute of Technology & Research, Gandhinagar | CGPA: 7.51/10
